EDUCATION

University of British Columbia

Bachelor of Science, Faculty of Science (Intended Computer Science)

Vancouver, BC

Sep 2026 – Apr 2030

TECHNICAL SKILLS

Languages: JavaScript/TypeScript, SQL (Postgres), Python, Golang, Java, HTML/CSS

Frameworks: React, Next.js, Node.js, Gin, Flask, Tailwind, PyTorch, Prisma ORM, Redis

Developer Tools: Git, Figma, AWS Lambda, Docker

EXPERIENCE

Software Engineer Intern

Sep 2025 – Jan 2026

Magic Hour (YC W24)

- Owned the full AI GIF-generation pipeline using Seedream 4.0 with NumPy seam detection, frame stitching, and interpolation, used by **100+ daily creators**
- Improved inference speed by **15%** and visual fidelity by **5–10%** on a talking photo generation system through A/B testing across diffusion samplers, and tuning hyperparameters based on metrics from real user generations
- Integrated a custom Qwen-2509 inference pipeline into the in-app image editor, replacing a third-party API with self-hosted serving and cutting user costs by **70%** while reducing latency by **15%**

Software Engineer Intern

Apr 2025 – Aug 2025

Heartline

- Engineered **10+** React Native screens with TypeScript-typed API integration and live audio/video playback, building the core mobile experience for an AI-powered wellness assistant used in daily check-ins
- Developed an animated avatar that voices chatbot responses with expressive speech and lip-sync via Azure Speech Synthesis at **sub-0.5s** latency, increasing user return rate by **20%**
- Architected a Go chatbot backend with WebSockets and REST, handling concurrent stateful conversations with Redis-backed session persistence and automatic reconnect recovery across mobile network drops

Technical Director - Co-Founder

Oct 2023 – Present

Futurlign

- Led AI workshops for **300+** students covering Python, neural network fundamentals, and reinforcement learning
- Secured over **\$7,000** in funding to support workshops, curriculum development, and outreach initiatives focused on AI education

PROJECTS

Eclypte – AI Video Editing Platform | *TypeScript, Next.js, Python, Redis*

Mar 2026 – May 2026

- Created an agentic AI platform that auto-edits short-form videos by analyzing audio beats and scene motion, with a custom agent harness leveraging OpenAI models to select and apply editing patterns as composable skills
- Engineered a FastAPI backend running multi-gigabyte video inference on Modal T4 GPUs with CLIP-indexed semantic retrieval and Cloudflare R2 zero-egress storage
- Deployed the full stack serverlessly on Vercel and Modal, scaling GPU inference on-demand with zero idle cost and handling burst traffic without provisioning

LifePod – MiniMedi Hacks 2024 1st Place | *TypeScript, React, Node.js, PostgreSQL*

Dec 2024

- Developed a medical collaboration web app with real-time WebSocket-based data sharing, enabling physicians to coordinate patient information across secure chatrooms
- Integrated ESP32-based physical devices with the web app, allowing users to trigger LED status indicators in real time from interactive dashboards

ChangePod – Hack the Change 2024 1st Place | *JavaScript, React, Python, Flask*

Nov 2024

- Built an AI-powered civic engagement platform pairing a web app with ESP32 voting hardware, aggregating constituent suggestions and votes into ranked, actionable feedback
- Debugged critical backend and hardware integration issues spanning CORS, ESP32 firmware, and Arduino serial communication
- Won **1st place** and **\$5,000** in prize money in a highly competitive university-level hackathon
